

Adam Davsko

Solutions Architect | Consultant | Senior Developer | Mentor

adam.davsko@gmail.com | [918.269.6533](tel:918.269.6533) | [LinkedIn](#)

Seasoned developer with 20+ years of experience building scalable web solutions, specializing in modern front-end frameworks (Angular, Vue), C#/.NET, and Azure services. Skilled in building user-centric applications and cloud-native APIs, with a strong focus on clean architecture, performance, and maintainability. Passionate about leveraging cloud platforms and AI tools to deliver everything from enterprise systems to minimalist, mobile-first apps. Seeking opportunities aligned with a deeper sense of purpose—where technology serves people, fosters growth, and contributes to something meaningful.

Technical Expertise

Languages & Frameworks:

C#, .NET (Core, 8, 9), JavaScript, TypeScript, HTML5, CSS3, SASS

Web & Front-End

Angular, Vue.js, ASP.NET Core, Razor, Tailwind, Material UI, Bootstrap

Cloud, SCM & DevOps:

Azure (Services, DevOps), Git, GitHub, Atlassian, Jenkins, CI/CD

Data & Integrations:

SQL Server, Entity Framework (Core), MongoDB, Cosmos DB, SSIS, SSRS, REST, GraphQL, OData

Practices & Tools:

Visual Studio, VS Code, Bash, Agile, Unit Testing, SOLID, DRY, Clean Code

Career Experience

MSF&W Consulting

Application Developer | 2019 – Present

- For the Illinois State Board of Education (ISBE), led development of a mobile-first, public-facing eligibility application using Vue.js backed by ASP.NET Core and SQL Server, enabling users to apply for state assistance programs. Delivered a modular, on-prem solution powered by a custom workflow engine and integrated with multiple state agencies and third-party vendors to support dynamic, program-specific logic.
- For the Illinois Department of Transportation (IDOT), played a pivotal role as lead developer in rewriting the Illinois Highway Inventory System, converting a legacy

Silverlight app into a modern Angular and .NET Core solution powered by Azure Functions, Azure Service Bus, and SQL Server Managed Instances.

- For IDOT, migrated on-prem SSIS packages to Azure SQL Server, fine-tuning integrations with SharePoint and internal API endpoints for robust data flows.
- For MSF&W, mentored junior developers and interns, providing guidance on coding practices, architectural principles, and career growth.

Karmak, Carlinville, IL

Technical Lead | 2018 – 2019

- Acted as a bridge between legacy and cloud development teams, facilitating knowledge transfer and guiding the re-architecture of embedded Windows app features into reusable Azure-based services for broader platform adoption.
- Participated in a mentorship program with new hires straight out of college, providing hands-on guidance in coding standards, debugging, and professional development.

CreditPoint Software, Owasso, OK

Technical Lead | 2017 – 2018, 2011 – 2015

- Using Angular backed by ASP.NET WebAPI and Cosmos DB, delivered end-to-end credit and collections platforms, working with vendors such as Moody's, D&B, and DocuSign to enable real-time integration and automation of credit risk insights, enhancing financial decision-making.
- Designed and implemented a workflow engine with C# and Entity Framework along with SQL Server and Cosmos DB to orchestrate credit review, approval, and issuance logic, enabling scalable automation and reducing process complexity.
- Designed and implemented a scalable, extensible correspondence service supporting email, fax, and FTP, with a pluggable architecture built to support future channels like SMS.
- Developed a client-facing reporting suite using MVC, Razor, and Telerik, enabling dynamic data exploration, export, and PDF generation for business users.
- Provided hands-on mentorship in technical design, development, and delivery, guiding teams toward scalable solutions and cultivating a culture of continuous improvement.
- Oversaw SOC 1 compliance efforts, coordinating with teams to ensure control adherence and leading audit preparation through detailed evidence collection and documentation.

BOK Financial, Tulsa, OK

Solutions Architect / Senior Developer | 2016 – 2017

- Initiated design and planning for a digital account-opening platform with eSignature and cloud storage for bank branches, establishing technical direction and core requirements before transition.
- Migrated legacy source control to TFS, established internal NuGet package repositories, and modernized CI/CD pipelines to streamline development and deployment workflows.
- Migrated ESB from webMethods to MuleSoft, utilizing Java-based connectors, enabling a microservices architecture and streamlining cross-system integrations.

QuikTrip Corporation, Tulsa, OK

Software Developer (Contract) | 2015 – 2016

- Built an internal AngularJS application backed by ASP.NET WebAPI and SQL Server to help HR teams manage employee data and administrative workflows.

Ascension Capital Group, Fort Worth, TX

Project Lead / Senior Developer | 2010 – 2011

- Initiated a team effort to retire a legacy FoxPro system and design a web-based ASP.NET application aimed at improving efficiency and maintainability for bankruptcy servicing operations.

ChoicePay / Tier Technologies, Reston, VA

Senior Developer | 2005 – 2010

- Developed a branded, single-page multi-tenant system for cross-device bill payment, delivering a user experience years ahead of industry norms.
- Created ad hoc reporting tools using C# with SharePoint integration, improving internal visibility into transaction data and performance metrics.
- Maintained and enhanced an internal call center application, supporting customer service operations and payment issue resolution.

Education**Associate of Science in Information Technology**

University of Phoenix

Additional coursework: Tulsa Community College, Oklahoma City Community College
